

## Come See the Leading-edge Storage Test Solutions from OakGate Technology at the 2018 Flash Memory Summit, August 7–9, Booth #807

**Loomis, California, July 31, 2018** – OakGate Technology is proud to be a part of the dynamic and exciting flash storage industry. Just in the past year, we witnessed a fascinating evolution of faster and higher-capacity solid state drives (SSDs), usage of flash in the cloud, hyper-converged data centers, NVMe over fabric, open channel SSDs, just a bunch of flash (JBOF) devices, software-defined storage, object storage, and the list goes on.

At OakGate, we have been busy driving innovations that deliver the industry's most advanced test solutions to help our customers offer cutting-edge products. **We want to thank all of you for making OakGate the #1 test solution for Solid State Storage!** We look forward to another year of mutual growth and success.

For the **2018 Flash Memory Summit (FMS)**, OakGate is showcasing products and technologies that are helping customers solve the most daunting problems during product development, validation, and manufacturing. We are delighted to tell you how we have grown our test platform solutions and to discuss how we can help you.

If you are curious about **emerging technologies** that will shape tomorrow's flash storage, here are some cool SSD test platform highlights that we are sharing at FMS:

- OakGate's **fourth-generation storage validation framework (SVF) test software, Enduro powered by SVF Pro 4.0**. This powerful, modular, flexible software is implemented using an architecture that dramatically enhances the OakGate's current SVF 3.x software, which is already the industry's most respected and mature storage test software
- OakGate's **all-in-one solution** that allows customers to test products supporting all popular protocols and form factors within a single appliance
- **Full NVMe 1.3 support**, test suite designed for UNH-IOL Mandatory tests, including IO Determinism
- **And finally, a sneak peek of some new pioneering technology**

We are now offering a full line of testers for reliability and manufacturing applications in partnership with Daichu Technologies of Japan. Daichu has a stellar reputation for high quality testers based on proven technology used by some of the world's most renowned storage suppliers. At FMS, we are showing a demo of the state-of-the-art Epic 10C0, a 10-slot chamber that can modulate temperatures from -5 to 90 °C. The Epic family exclusively uses OakGate's SVF and Greenlight (Manufacturing Test Application) software.

Visit us at [www.oakgatetech.com](http://www.oakgatetech.com) and learn all the latest and greatest about OakGate Technology. There is a wealth of information you can peruse or download!

Thanks again for your support over the past year. Come see us at this year's FMS and let us chat about how we can continue to bring more value and be a partner in your success going forward.

***We look forward to seeing you at the 2018 Flash Memory Summit, August 7–9, at the Santa Clara Convention Center Booth #807!***
