

OakGate Technology Continues to Innovate with Release of the DE200 Expandable Desktop Appliance

*The world leader for SSD test and validation platforms launches DE200,
a completely redesigned expandable desktop appliance powered by
OakGate's advanced fourth generation storage test software*

Loomis, California, January 15, 2019 – OakGate Technology, the industry leader in advanced, high-performance test solutions for flash storage, announced the release of its DE200 Expandable Desktop Appliance. Designed from the ground up, the DE200 expandable desktop appliance provides significant airflow improvements and mechanical and thermal design enhancements. It also features an adjustable fan speed knob for quieter operation.

The PCIe Gen3 slots are conveniently accessed through a separate top door so that the PCIe add-in cards (AICs) can be swapped easily and quickly. The fan speed knob and indicator on the front panel empowers the user to optimize the fan speed (and noise) based on the number of AICs and their usage. Additionally, the rugged, reinforced design of this 4U appliance provides a solid and secure test foundation that can be utilized on a desktop or installed in a standard data center rack.

The DE200 provides maximum expansion possibilities in a desktop form factor. It includes four backplane PCIe Gen3 slots for testing AICs or connecting to a variety of external enclosures. With OakGate's optional M-Series 4-Bay U.2 Plug-In Module, the DE200 can test up to four U.2 multi-protocol SSDs with integrated power management. OakGate plans to provide solutions supporting power margining capabilities for the DE200 in the near future.

“The flash storage industry is extremely dynamic and is advancing at a rapid pace. As an industry leader, OakGate strives to provide products that meet the evolving needs of our customers,” stated Bob Weisickle, Founder and Chief Strategy Officer of OakGate Technology. “With the launch of the DE200, we have raised the bar in terms of functionality and reliability. Engineered with customer-driven new features, we fully expect rapid adoption of the DE200 by our customers worldwide,” added Mr. Weisickle.

The DE200 also incorporates Storage Validation Framework (SVF) Pro, OakGate's fourth generation test suite featuring Enduro, the industry's most advanced controller application with a powerful drag and drop windowing system and a multitasking environment that allows users to simultaneously open multiple instances of each tool. SVF Pro offers a comprehensive set of features and capabilities that are based on OakGate's unique experience in working closely with a broad range of customers and understanding their requirements.

The DE200 is available now. Please contact OakGate technology for price and delivery information.

About OakGate Technology

OakGate Technology Inc. (www.oakgatetech.com) is the #1 test solution for solid state storage and the recognized leader for test and validation tools worldwide. OakGate's highly-capable and flexible platforms support all popular storage protocols and are based on advanced, proprietary software, and industry standard hardware. OakGate's products have been deployed by top tier components suppliers, drive manufacturers, storage system OEMs and data centers worldwide. A privately-held company, OakGate Technology was founded in 2008 by industry veterans from the storage and server industries. The company is headquartered in Loomis, California.
